

GREEN POLICY

SUSTAINABILITY
OUR INITIATIVES

At Mammoth Film Studio, we are dedicated to creating world-class film and media content while minimising our environmental impact. As part of our ongoing efforts to operate sustainably, we have implemented a comprehensive Green Policy that reflects our commitment to environmental stewardship — integrating sustainable practices throughout our operations, from energy use and waste management to transportation and supplier partnerships. We also prioritise supporting local suppliers who align with our green values.

1 RENEWABLE ENERGY SUPPLY

We are proud to operate on 100% renewable energy. All electricity used across our studio is sourced from sustainable energy providers, including solar, wind, and hydropower. The energy usage for every shoot is recorded to log consumption and can act as a basis to plan for more energy-efficient productions.

2 ZERO LANDFILL WASTE

We have implemented a zero landfill waste policy. All waste generated in our studio is carefully sorted for recycling or composting. We work with accredited waste management providers to ensure all materials — paper, plastic, metal, or organic — are processed responsibly. Our waste segregation system includes clear signage for staff and visitors.

3 RECYCLING ACCREDITATION

We take our commitment to recycling seriously. Our recycling program is accredited by leading waste management organisations, ensuring we comply with industry best practices and environmental standards. We strive to improve our recycling rates continuously and encourage our partners to do the same.

4 ENERGY-EFFICIENT LED LIGHTING

To reduce our energy consumption, LED lighting has been installed throughout the studio. LED lights are more energy-efficient and have a longer lifespan than traditional bulbs. The same is true for our film lighting supplied by Cinelight, which stocks and advocates for the latest in LED lighting technology.

5 RECYCLABLE COFFEE CUPS

In our efforts to reduce single-use plastics, we have replaced traditional disposable coffee cups with recyclable cups. We also offer reusable cups and encourage staff and visitors to bring their own. To eliminate bottled water waste, we have installed water coolers throughout the studio.

6 REDUCING SINGLE-USE PLASTICS

We are committed to reducing single-use plastics across our operations. We have eliminated plastic straws and encourage reusable alternatives wherever possible. We also collaborate with our catering suppliers to ensure all food and beverage packaging used on set is recyclable or compostable.

7 PAPERLESS WORKFLOWS

To minimise our environmental impact, we actively encourage the use of digital documents and paperless workflows across all departments, with digital project management systems to streamline workflows. For any physical documentation that is necessary, paper products are made from recycled materials and are fully recyclable.

8 REUSABLE SET DEC

In an effort to reduce waste from one-off set builds, we stock re-useable flats which are available to productions to rent. It is convenient, cost saving and environmentally considerate.

9 FOOD WASTE

We support a local homeless charity by donating unwanted food supplies left behind after shoots. This helps support the local community and reduce food waste.

10 SUPPORTING LOCAL SUPPLIERS

Sustainability extends beyond our walls. We encourage the use of local suppliers who share our commitment to environmental responsibility — reducing our carbon footprint while supporting local businesses. We prioritise suppliers who demonstrate:

- **Eco-friendly packaging** — recyclable, biodegradable, or reusable packaging.
- **Sustainable materials** — preference for sustainable or ethically sourced materials for our productions.
- **Waste minimisation** — effective waste reduction and recycling programs.

11 PROMOTING SUSTAINABLE TRANSPORT

We recognise the importance of sustainable transportation in reducing our collective environmental impact, and have implemented initiatives to make green travel easier:

- **Proximity to public transport** — our studio is located near bus, train, and tube lines, making it easy to commute sustainably and reduce individual car journeys.
- **Bicycle rack** — an on-site bicycle rack provides a safe, convenient place to park, encouraging more people to leave their cars at home.
